

MANUFACTURING EXCELLENCE

Taking excellence and making it better

Over the years, our manufacturing facilities and our commitment to operational excellence have held us in good stead. Now, we are reimagining manufacturing by exploring innovative process technology, that pegs us ahead of the curve.

Novel initiatives

We, at Granules, are focusing on developing differentiated technologies to enable the production of complicated formulations. During the year, we completed a new finished dosage block for the manufacture of MUPS (Multi-unit pellet system) products, with an investment of ₹ 240 Crore. MUPS has become one of our specialized manufacturing facilities. We have already received approval for a number of products and are in the process of acquiring the remaining soon. Once commercial operations begin, we will emerge as one of the largest suppliers of MUPS capacity across the world on the chosen set of approved molecules, which are going to get launched in the US and Europe market.

We are evaluating opportunities to offer product, process, and related services to customers in oncology. Last year, we completed the submission by validation batches and technology transfer is in progress for several products. The commercial supplies from oncology block are expected as soon as we receive regulatory approvals this year.

With an investment of ₹ 240 Crore, MUPS has become one of our specialized manufacturing facilities.
